

ID Based Wander Management Solutions

Improve Staff Response Times

With a Secure Care ID based system you can associate resident or patient information to the transmitter they wear so that if an instance occurs where an alarm or alert goes off you know exactly how many people are involved and who each of them are.

The Secure Care Software will display a floor map letting you know exactly which area of the facility an event is happening in. You can also associate a picture with each transmitter during registration. That way when that person is involved in an event the software displays a visual of the resident/patient involved enhancing recognition and response time.

Get Information sent directly to mobile devices

mVision allows staff members to receive notifications of events as they occur. This way they do not need to be near the software or exit to hear an alarm occur. They will be notified with all the pertinent information sent directly to smartphones and tablets, enhancing recognition and response time.
